Weekly Cases and Rates

COVID-19 cases are identified by taking specimens from people and sending them to laboratories around the UK to be tested. If the test is positive, this is referred to as a lab-confirmed case.

New Cases

In the 7 days to 11th June, Solihull had 145 new lab-confirmed cases, a rate of 67.0 per 100,000 population. This was an increase of 79% on the previous 7 days.

The breakdown of cases in Solihull by week over time is shown below. It should be noted that case numbers prior to May are not directly comparable as there was much more restricted access to testing.

*To avoid the possibility of identifying individuals, the exact number of cases is not given where there have been 3 cases or less in a ward over the past 14 days.

Reproduction Number (Rt)

The reproduction number is the number of people that one infected person will pass on a virus to, on average. If the reproduction number is higher than one, then the number of cases increase exponentially. If the number is lower the disease will eventually stop spreading, as not enough new people are being infected to sustain the outbreak. The current reproduction number (Rt) for the Midlands region can be found at https://www.gov.uk/guidance/the-r-number-in-the-uk.
