

NHS COVID-19 app **Notifications and alerts**

Find out more about the alerts in the app, how to control them and how they can help to keep you safe

The app uses different types of alerts:

Contact tracing alerts

- Get an alert if you have been near other app users who test positive for coronavirus (COVID-19)
- For contact tracing to work, the app detects and logs other nearby app users using random unique IDs
- If any of those users test positive for coronavirus, you will receive an anonymous alert, with advice on what to do

Postcode alerts

- Lets you know the level of coronavirus risk in your postcode district
- You can check the app to see if where you live has become a high risk area for coronavirus
- This will help you make daily decisions to protect yourself and those you love

Exposure alerts

- You may receive an alert if you have recently visited a venue where you may have come into contact with coronavirus
- The app allows you to record when you visit a venue by checking-in as you arrive, using the venue's QR poster. App users will still need to give contact details to some venues
- The app records the time you spend at the venue without recording any personal information

To download, search for the **NHS COVID-19** app

All of the information and images in this document are correct as of 24th September 2020. For more information on the app visit **www.covid19.nhs.uk**

NHS COVID-19 app Notifications and alerts

How to change the notification settings on your phone

Changing your notifications settings on Apple iOS phones:

To do this, first find the "Settings" app and tap it.

4	<u> </u>
\smile	Notifications NHS COVID-19 app
	Allow Notifications
