1. Introduction

1.1. Background

The 2013 Solihull Local Plan (SLP), adopted in December 2013, sets out a long term spatial vision for how the borough of Solihull will develop sustainably between 2011 and 2028. It focuses on twenty-one core policies to deliver the spatial strategy. Policy P7 (Accessibility and Ease of Access) identifies a range of accessibility criteria that new developments are expected to meet, in order to focus development in the most accessible locations, enhance existing levels of accessibility and promote ease of access. The accessibility criteria for proposed housing developments are set out as follows:

- Within an 800m walk distance of a primary school, doctor's surgery and food shop offering a range of fresh food; and
- Within a 400m walk distance of a bus stop served by a commercial high frequency bus services (daytime frequency of 15 minutes or better) providing access to local and regional employment and retail centres; and/or
- Within an 800m walk distance of a rail station providing high frequency services (three or more per hour during peak periods) to local and regional employment or retail centres.

Since the SLP was adopted in December 2013, a legal challenge has resulted in the overall housing requirement being deleted and remitted back to the Council for reconsideration. As a result, a review of the SLP is currently in progress.

Atkins has been commissioned by Solihull Metropolitan Borough Council (SMBC) to examine the accessibility criteria in relation to accessibility to local facilities and public transport infrastructure, to inform the evidence base for the SLP review. A systematic approach was adopted whereby consideration was given initially to areas of the Borough which met the Policy P7 criteria set out in 2013 SLP. A further assessment was undertaken whereby relaxations to the Policy P7 criteria were applied for the SLP review. The final part of the assessment involved the relative comparison of 223 sites put forward as part of the SLP review call for sites against the Policy P7 criteria. This assessment only takes into consideration accessibility on foot and does not consider vehicular access.

1.2. Report Purpose

This report sets out the methodology applied in the commission and informs the evidence base for the review of the 2013 SLP.

1.3. Report Structure

This report comprises the following:

- **Chapter 2** sets out the methodology used to produce isochrones for the accessibility criteria set out in the 2013 SLP (P7);
- **Chapter 3** describes the methodology for producing isochrones demonstrating relaxations of the accessibility criteria set out in the 2013 SLP (P7);
- **Chapter 4** details the methodology for assessing the relative accessibility of 223 potential residential sites against accessibility criteria set out in the SLP review (P7); and
- **Chapter 5** summarises and concludes the report.

2. Access to Local Facilities

2.1. Introduction

The section of the report sets out the methodology used for the first part of the accessibility study, which produced a set of isochrones to demonstrate areas which fall within the 2013 SLP criteria for maximum walking distances to local facilities and public transport infrastructure.

2.2. Walking Network

The distances set out in the accessibility criteria provided in Policy P7 of the 2013 SLP relate to walking distances to the given facilities. In order to examine access to local amenities and bus/rail services, a comprehensive network of walking routes had to be assembled in ArcMap (GIS Software). This layer was created using road network, shared cycle routes and public rights of way information. Furthermore, for those off-road routes, further criteria were applied which included that the route had to be surfaced and lit.

The following provides full details of the methodology used to obtain a comprehensive network of suitable walking routes:

- Ordnance Survey (OS) Integrated Transport Network (ITN) Road Network Layer – provided by SMBC and includes all classifications of road including minor access roads. This was edited to remove roads which were unsuitable for walking along, including motorways e.g. M42 (and slip roads) and dual carriageways with no pedestrian facilities e.g. A452. It was assumed that despite there being no specific infrastructure for pedestrians on country/rural roads that these would still most likely be used by pedestrians in these areas.
- Shared Use Cycle Routes - SMBC provided data for shared use cycle routes. These were classified as 'suitable' for the purposes of this study, if the route was lit. This was assessed using data provided by SMBC which gave the location of lamp posts. The selection of these routes was further verified using Google StreetView to make sure that this condition was met. Unlit routes which ran through parks in dense urban areas, were kept in the dataset as it could be argued that during the majority of the day (when most of the facilities would be accessed) and summer months (when there are longer daylight hours and walking is more likely) they would be useable. For the purposes of this study, any shared cycle routes which ran directly alongside the road were removed to avoid duplication of the road network.
- Public Rights of Way (PROW) - SMBC provided data for PROWs. These were assumed to be 'suitable' if they had a metalled surface and were lit. Those which met these criteria were then manually verified using satellite imagery. Some PROW were then manually removed, including an unlit route through the middle of a golf club. PROW routes which were blocked or obstructed were also removed from the dataset. Unlit routes which ran through parks in dense urban areas, were kept in the dataset as it could be argued that during the majority of the day (when most of the facilities would be accessed) they would be useable. For the purposes of this study, any shared cycle routes which ran directly alongside the road were removed to avoid duplication of the road network.

These three datasets were then merged to create the comprehensive walking network for use in the assessment.

Walking Routes were included for up to 800m outside of the Solihull Borough Boundary, as this allowed the study to account for facilities which were outside of the borough boundary, but within acceptable walking distances of areas within the Borough.

The existing infrastructure included in the walking network is considered to be up to date and current at the time at which this study was carried out. It does not allow for proposed infrastructure that would be delivered as part of any future development within the Borough.

2.3. Preparation of Isochrones

Isochrones were created using the Network Analyst extension of ArcMap (GIS software). This used the walking network to create isochrones in 100m bands, up to the maximum acceptable distance for each facility set out in the 2013 SLP. The bands used for each facility are shown in **Table 2-1**.

Table 2-1 Isochrone bands for each facility

Facility	2013 SLP Criteria (m)
Bus Stops	100, 200, 300, 400
Food Shops	100, 200, 300, 400, 500, 600, 700, 800
Primary Schools	100, 200, 300, 400, 500, 600, 700, 800
GP Surgeries	100, 200, 300, 400, 500, 600, 700, 800
Rail Services	100, 200, 300, 400, 500, 600, 700, 800

2.4. Access to Local Amenities

To examine access to local amenities, the following criteria were assessed:

- The primary schools which were included in this study were state primary schools within Solihull Borough Boundary only. This data was provided by SMBC, which was treated as up to date so therefore required no further verification. Special Educational Needs schools were not included as these tend to have much wider catchment areas. A full list of primary schools used in the study is included in **Appendix A**.
- The GP surgeries which were included in this study were NHS facilities which fell within the Borough and up to 800m beyond the Solihull Borough Boundary. This data was provided by SMBC and verified using Google Streetview and NHS website (www.nhs.uk). A full list of GP Surgeries used in the study is included in **Appendix A**.
- The food shops which were included in this study were all permanent, fresh fruit and vegetable retailers within the Borough and up to 800m beyond the Solihull Borough Boundary. The Department for Transport (DfT) food shops database¹ (which includes major supermarkets, discount food shops and chain convenience stores including Spar, Co-Op and Costcutter) and data provided by SMBC, using licensing information held internally, was used as a starting point. In order to verify that all food shops selling fresh fruit and vegetables had been accounted for, a manual search was conducted in all areas not already covered by an 800m buffer (actual walking distance) using an Internet search. Markets were not included as they are not a permanent source of fresh fruit and vegetables. A manual verification of all food shops (including those provided by SMBC) was conducted, to make sure that they were still in operation at the time of the verification and sold fresh fruit and vegetables. This was carried out using websites of larger retailers, Google Streetview, phone calls, and site visits to smaller retailers. A full list of food shops, including those removed as part of the verification process, is included in **Appendix A**. Two retailers located in Birmingham Airport were included in the analysis, however, it is important to note that these may not be viable food shops for members of the public to access on a regular basis.

2.5. Access to Bus Services

The 2013 SLP sets out that new residential developments should be within a 400m walking distance of a bus stop served by a commercial high frequency bus services (daytime frequency of 15 minutes or better) and/or within an 800m walk distance of a rail station providing high frequency services (three or more per hour during

¹ DfT food shops database – data from 2011 for stores which sell fresh fruit and veg from www.data.gov.uk

peak periods) to local and regional employment and retail centres. Therefore, bus stops which provided a cumulative daytime frequency of 15 minutes or better which provide access to local and regional employment and retail centres, have been considered in this part of the assessment.

TRACC² was used to extract bus stops which met this criteria, whose coordinates were then mapped in GIS software. **Table 2-2** details the conditions which were used to extract data from TRACC.

Table 2-2 Criteria for data extracted from TRACC

Time of Day/Week	Criteria
Daytime Frequency	Monday, 7am – 7pm

Bus stops within the borough and up to 400m beyond the Solihull Borough Boundary, were included in the study.

2.6. Access to Rail Services

To examine access to Rail Services, railway stations within the Borough and up to 800m beyond the Solihull Borough Boundary were included in the study. Policy P7 states that proposed housing development should be within an 800m walk distance of a rail station providing high frequency services (three or more per hour during peak periods) to local and regional employment and retail centres and/or within a 400m walking distance of a bus stop served by a commercial high frequency bus services (daytime frequency of 15 minutes or better. Following instruction from SMBC, only railway stations which had at least three services per hour in at least one direction during peak periods (07:00-09:00 and 16:00 to 18:00) were included.

These criteria was evaluated for each station using the National Rail website. Wythall, Earlswood and The Lakes railway stations did not meet the criteria, so were not included for further analysis. A full list of the railway stations, and those removed, is included in **Appendix A**.

2.7. Map Outputs

Maps of services and amenities which meet the criteria set out in the 2013 SLP are in shown in **Figure 1A-F**, provided in **Appendix B**. The aggregate isochrone plan showing all areas meeting local facility, bus and rail criteria in the 2013 SLP, overlaid with the 223 sites put forward as part of the SLP review call for sites, is set out in **Figure 1G**.

Figure 1A to F – Criteria set out in 2013 SLP

- A. Isochrone of up to 800m walk distance to primary schools in 100m bands;
- B. Isochrone of up to 800m walk distance to GP Surgeries in 100m bands;
- C. Isochrone of up to 800m walk distance to food shops in 100m bands;
- D. Isochrone of up to 400m walk distance to bus stops served by commercial bus services with a cumulative daytime frequency of 15 minutes or better;
- E. Isochrone of up to 800m walk distance to a rail station which is served by at least three services per hour in at least one direction during peak periods (07:00-09:00 and 16:00 to 18:00); and
- F. Aggregate isochrone of all areas meeting all local facility, bus and rail criteria in the 2013 SLP.
- G. Aggregate isochrone of all areas meeting all local facility, bus and rail criteria in the 2013 SLP overlaid with 223 housing sites from SLP review call for sites.

² TRACC – a piece of software used to assess multi-modal transport accessibility

3. Relaxation of 2013 SLP Criteria

3.1. Introduction

Due to the modest coverage of all Policy P7 criteria, relaxations of these criteria and additional public transport criteria were also mapped, as part of the SLP review. This section of the report sets out the methodology used for this part of the assessment. The same facilities and walking network were used as set out in **Section 2**.

3.2. Preparation of Isochrones

Isochrones were created using the Network Analyst extension of ArcMap GIS software. This used the walking network to create isochrones in 100m bands beyond to the maximum acceptable distance for each facility set out in the 2013 SLP. The relaxation bands used for each facility are shown in **Table 3-1**.

Table 3-1 Isochrone bands for each facility

Facility	2013 SLP Criteria (m)	Relaxation of 2013 SLP Criteria (m)
Bus Stops	100, 200, 300, 400	500, 600
Food Shops	100, 200, 300, 400, 500, 600, 700, 800	1000, 1200
Primary Schools	100, 200, 300, 400, 500, 600, 700, 800	1000, 1200
GP Surgeries	100, 200, 300, 400, 500, 600, 700, 800	1000, 1200
Rail Services	100, 200, 300, 400, 500, 600, 700, 800	1000, 1200

3.3. Additional Bus Services Criteria

In addition to the bus criteria set out in the 2013 SLP, Atkins was commissioned by SMBC to consider additional criteria as follows:

- Cumulative daytime frequency of 30 minutes or better which provide access to local and regional employment and retail centres;
- Cumulative evening and weekend frequency of 60 minutes or better;
- Cumulative daytime frequency of 15 minutes or better and evening/weekend frequency of 60 minutes or better; and
- Cumulative daytime frequency of 30 minutes or better and evening/weekend frequency of 60 minutes or better.

TRACC was used to extract bus stops which met these criteria, whose coordinates were then mapped in GIS software. **Table 3-2** details the conditions which were used to extract data from TRACC.

Table 3-2 Criteria for data extracted from TRACC

Time of Day/Week	Criteria
Daytime Frequency	Monday, 7am – 7pm
Evening Frequency	Monday, 7pm – 11pm
Weekend Frequency	Saturday, 7am – 7pm

Bus stops within the borough and up to 400m beyond the Solihull Borough Boundary were included in the study.

3.4. Map Outputs

Maps of relaxations of the 2013 SLP criteria for the SLP review are shown in **Figure 2A – F**, provided in **Appendix C**. Additional public transport criteria (not set out in 2013 SLP) are shown in **Figure 3A – D**, provided in **Appendix C**. Aggregate plans using these additional public transport criteria are shown in **Figures 4A-B**, also provided in **Appendix C**.

The aggregate plan using two relaxations of SLP criteria overlaid with the 223 sites put forward as part of the SLP review call for sites, is set out in **Figure 2G**.

Figures 2A to F – Relaxation of criteria set out in 2013 SLP

- A. Isochrone of up to 1.2km walk distance to primary schools banded by 2013 SLP compliant (up to 800m), +200m and +400m beyond the 2013 SLP criteria;
- B. Isochrone of up to 1.2km walk distance to GP Surgeries banded by 2013 SLP compliant (up to 800m), +200m and +400m beyond the 2013 SLP criteria;
- C. Isochrone of up to 1.2km walk distance to food shops banded by 2013 SLP compliant (up to 800m), +200m and +400m beyond the 2013 SLP criteria;
- D. Isochrone of up to 600m walk distance to bus stops served by commercial bus services with a cumulative daytime frequency of 15 minutes or better banded by 2013 SLP compliant (up to 400m), +100m and +200m beyond the 2013 SLP criteria);
- E. Isochrone of up to 1.2km walk distance to a rail station which is served by at least three services per hour in at least one direction during peak periods (07:00-09:00 and 16:00 to 18:00) banded by 2013 SLP compliant (up to 800m), +200m and +400m beyond the 2013 SLP criteria; and
- F. Aggregate isochrone of all areas meeting all local facility, bus and rail criteria in the 2013 SLP banded by 2013 SLP compliant and two further relaxations (up to 200m and 400m for local facilities and rail services and up to 100m and 200m for bus services) beyond the 2013 SLP criteria.
- G. Aggregate isochrone of all areas meeting all local facility, bus and rail criteria in the 2013 SLP banded by SLP compliant and two further relaxations (up to 200m and 400m for local facilities and rail services and up to 100m and 200m for bus services) beyond the 2013 SLP criteria overlaid with 223 housing sites from SLP review call for sites.

Figure 3A to D - Additional Public Transport Criteria (not set out in 2013 SLP)

- A. Isochrone of up to 600m walk distance to bus stops served by commercial bus service with a cumulative daytime frequency of 30 minutes or better in 100m bands;
- B. Isochrone of up to 600m walk distance to bus stops served by a commercial bus service within a cumulative daytime frequency of 30 minutes or better and evening/weekend frequency of 60 minutes or better in 100m bands;
- C. Isochrone of up to 600m walk distance to bus stops served by a commercial bus service within a cumulative evening and weekend frequency of 60 minutes or better in 100m bands; and
- D. Isochrone of up to 600m walk distance to bus stops served by a commercial bus service within a cumulative daytime frequency of 15 minutes or better and evening/weekend frequency of 60 minutes or better in 100m bands.

Figure 4A to B – Aggregate Plans for Additional Public Transport Criteria (not set out in 2013 SLP)

- A. Aggregate isochrone of all areas meeting all 2013 SLP facility criteria, 2013 SLP rail and/or additional Public Transport Criteria (Bus stops served by cumulative daytime frequency of 30 minutes or better) banded by 2013 SLP compliant and two further relaxations (up to 200m and 400m for facilities and rail services and up to 100m and 200m for bus services) beyond the 2013 SLP criteria.
- B. Aggregate isochrone of all areas meeting all 2013 SLP facility criteria, rail and/or additional Public Transport Criteria (Bus stops served by a service with a cumulative daytime frequency of 30 minutes or better an evening/weekend frequency of 60 minutes or better) banded by 2013 SLP compliant and two further relaxations (up to 200m and 400m for facilities and rail services and up to 100m and 200m for bus services) beyond the 2013 SLP criteria.

4. Housing Site Accessibility

4.1. Introduction

This section summarises the methodology used to carry out a relative assessment of accessibility from 223 potential residential sites in the Borough, based on existing infrastructure and facilities. The sites were identified as part of the SLP review call for sites. It then goes on to describe the methodology used for providing additional consideration for new facilities/infrastructure and the assessment of the suitability of walking routes.

The assessment was again carried out based on accessibility on foot, and does not consider accessibility for other modes. The local facilities and public transport infrastructure identified in the first part of the assessment have been utilised. Sites defined as 'other' or 'employment' have not been included in the assessment.

4.2. Points of Access

Potential site access points have been identified in order to assess each of the 223 potential residential sites against the accessibility criteria set out in policy P7 of the 2013 SLP. These site access options have not been subject to technical review for their feasibility, and are just intended to give an indication of accessibility.

For each site, a point of access was located at the mid-point of any section of public highway or Public Right of Way (PRoW) bordering the site. These coordinates were plotted in GIS Software to produce the plan shown in **Figure 5A (Appendix D)**. The accessibility score provided for each facility represents the best accessibility from any point of access for that site.

For those sites which do not border an existing road, a point of access has been provided on the nearest road. In some cases, this was provided through another potential site, and this has been noted in the summary spreadsheet provided in **Appendix E**.

4.3. Accessibility Assessment

4.3.1. Access to Local Facilities

To calculate an accessibility score for access to local facilities, GIS software was used to calculate the distance from each access point to the nearest facility. The distance to the nearest facility for each site was then identified. Each site was assigned an accessibility score, as shown in **Table 4-1**. The accessibility to these facilities is based only on distance, and does not consider available capacity at these facilities.

Those sites which were fully compliant with the 2013 SLP criteria, or compliant within one or two relaxations were given a defined score. Those which were beyond the greatest relaxation (*), were banded and given a score within the bands defined in **Table 4-1**, based on distance to the nearest facility, relative to the other sites.

Table 4-1 Scoring for Accessibility to Local Facilities

Band	Primary School	Food Store	GP Surgery
Policy P7 Accessibility Criteria (up to 800m) and provision of new facilities	100	100	100
Relaxation 1 (up to 1000m)	80	80	80
Relaxation 2 (up to 1200m)	60	60	60
Beyond (over 1200m)	5 – 50*	5 – 50*	5 – 50*

4.3.2. Access to Public Transport

To calculate an accessibility score for access to local facilities, GIS Software was used to calculate the distance from each access point to the nearest facility. The distance to the nearest facility for each site was then identified. The accessibility criteria is for bus **and/or** rail, therefore, each site was given a score that represents the highest score for bus or rail accessibility, as shown in **Table 4-2**. For example, if a site scores 80 for bus accessibility and 60 for rail accessibility, the site would be awarded a score of 80 for public transport accessibility. This assessment does not take into consideration capacity on bus and rail services.

Those sites which were fully compliant with the 2013 SLP criteria, or compliant within one or two relaxations were given a defined score. Those which were beyond the greatest relaxation (*), were banded and given a score within the bands defined in **Table 4-2** based on distance to the nearest facility, relative to the other sites.

Table 4-2 Scoring for Accessibility to Public Transport Services

Band	Bus Services	Rail Services
Policy P7 Accessibility Criteria (up to 400m for bus and 800m for rail) and provision of new facilities	100	100
Relaxation 1 (up to 500m for bus and 1000m for rail)	80	80
Relaxation 2 (up to 600m for bus and 1200m for rail)	60	60
Beyond (over 600m for bus and 1200m for rail)	5 – 50*	5 – 50

4.3.3. Total Accessibility Score

The total of the accessibility scores for each type of local facility and public transport, have been added together to provide a total accessibility score for each potential housing site. The 223 sites have then been ranked according to the total score. The higher the accessibility score, the more accessible that site is deemed to be. This is provided in the separate summary spreadsheet. The map provided in **Figure 6A (Appendix F)** shows the total accessibility score for each of the potential housing sites where green sites are those with the highest accessibility score, and red sites are those with the lowest. This score does not reflect the possibility of taking multiple, adjacent sites forward together.

4.4. Provision of New or Improved Facilities and Infrastructure

4.4.1. Provision of New Facilities and Infrastructure

Some of the sites provided by SMBC were identified as potentially providing a school or retail facilities, based on guidance presented in *Sustainable Settlement: A Guide for Planners Designers and Developers* in relation to the number of dwellings provided on the site. SMBC provided the housing allocations for some of the sites, however, for those where no housing allocation was provided, an assumption of 30 dwellings per hectare has been used. For sites that were of a sufficient size to justify the provision of a school/retail facilities, a comment has been provided in the summary spreadsheet (**Appendix E**) in relation to the impact that the provision of these facilities would have on accessibility from adjacent residential sites.

It has also been identified that some of the potential sites for development will result in the loss of local facilities, for example school premises. Those sites at which accessibility will be affected (either an improvement or reduction) have been identified, and a comment has been provided in the summary spreadsheet (**Appendix E**).

SMBC have identified that there are a number of committed infrastructure schemes which are likely to come forward during the duration of the SLP review that will affect access to local facilities and public transport

infrastructure. The impact of future transport infrastructure or development on the proposed site submissions will be assessed by the Council.

4.4.2. Suitability of Walking Routes

In order to identify sites which may use '*unsuitable*' walking routes to access local facilities and public transport infrastructure, the assessment has identified sites that currently have access onto a road with no footway provision.

A manual search was conducted to identify if there was footway provision along the frontage of the site. For the purposes of this assessment, no consideration has been given to the adequacy of the provision, for example the width or quality of the footway. A comment has been provided for each site in the summary spreadsheet (**Appendix E**), as follows:

- No footway provision along site frontage –at least one road fronting the site does not have footway provision.
- Footway provision along site frontage – all roads fronting the site have footway provision.

5. Summary and Conclusion

5.1. Summary

Atkins has been commissioned by Solihull Metropolitan Borough Council (SMBC) to assess accessibility to local facilities and public transport infrastructure within the Solihull Borough Boundary. This assessment has been based on accessibility criteria set out in Policy P7 (Accessibility of Ease of Access) of the 2013 Solihull Local Plan. A systematic approach has been taken to understand areas of the Borough which meet the Policy P7 criteria, and also relaxations of this criteria. The results of this assessment have been used to undertake a relative comparison of 223 potential housing sites put forward as part of the SLP review call for sites, against the 2013 SLP Policy P7 criteria. Additional assessment has been provided by Atkins as to the suitability of walking routes, and the impact of the provision of new facilities to accessibility from the 223 potential housing sites.

This assessment is a technical document to support the evidence base for the Local Plan Review and site selection process. The purpose of this assessment is to compare settlements and housing site submissions on a like-for-like basis against current accessibility levels. The outputs of the study indicate where accessibility levels would require improvement to sustainably accommodate new residential development. It is beyond the scope of this study to evaluate the capacity of facilities or public transport corridors nor assess the impacts of the aggregated site submissions. It is for the Council to give due consideration to the findings of this report in the Local Plan Review.

5.2. Conclusion

It is considered that this study provides a systematic assessment of accessibility within the Solihull Borough Boundary, and that outputs can be used for future assessment of the accessibility from potential housing sites identified in the SLP review call for sites.

Appendices

Appendix A. Raw Data
